

Command pattern Lab

Given is the following bank application:

We want to add undo/redo functionality for the methods deposit(), withdraw() and transferFunds().

- Draw the modified class diagram with the command pattern applied.
- Draw a sequence diagram that shows how your new design works. On the sequence diagram you should first call deposit() on the AccountService, and then execute the undo() action.
- Implement the command pattern in the given code. You should be able to undo/redo the methods deposit(), withdraw() and transferFunds() on the AccountService.
